

HOW THE SYSTEM WORKS

STAGE 1: SEDIMENT FILTRATION I

Removes solids and reduces the dissolved solids down to 1 micron.

STAGE 2: CARBON FILTRATION 001

Combination carbon filter reducing up to 99% of all metals, hormones, pesticides, odour and nitrates out of water, including fluoride and oestrogen.

STAGE 3: SUPERCERAMICS

Antibacterial Media

STAGE 4: RE-MINERALISATION

Addition of trace minerals such as Calcium, Magnesium, Sodium, Potassium e.c.t.

STAGE 5 ANTI- SCALE MEDIA

(Whole house only)

Anti-Scale media is used to transform mineral ions into nano microscopic crystals which are stable and cannot attach to pipes, surfaces or heat exchanger components.

STAGE 6: ACTIVATION AND ALKALISATION

Negatively charged ceramic media, catalytic reaction + vortex charge provides a stable and bespoke pH using natural alkaline minerals.
